# Decrease your testing time with testingON, a NO-CODE test automation engine

# NOESIS testing O N®

simplified test automation

testingON is a solution that simplifies test automation in an intuitive, fast and versatile way. You can now optimize the time to market

of a solution while reducing costs and its overall development cycle.

### **Teams**

testingON can be made available to every team in need to automate tests.

### Results

Test results are automatically created and saved in the test management platform.

### Scheduling

Schedule test executions for after working hours and get detailed results the next day.

### Low Effort and Artificial Intelligence

Leave test maintenance for the testingON AI module, which detects error prone object identifiers and automatically replaces them in order to improve test resilience.

### Non-technical

Non-technical people can automate tests.

### Run

Ability to run tests on all the main operating systems, browsers, mobile devices and containers (dockers).

### Adaptability

Every test can be easily adapted to be executed in multiple environments (DEV, tst, PRD, ...) without the need for duplication.

### Create

Every team can create test cases, and these may even be specified before the software development. For web and mobile there is also the possibility to record the process manually.

# testingON allows

**TEST** 

**AUTOMATION** 

**MADE INTUITIVE** 

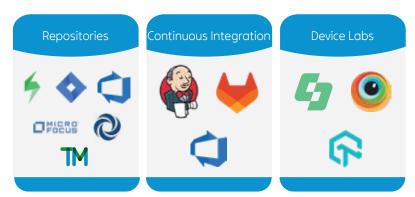

testingON is built to ensure integrability with test and defect management tools, working on all major operating systems and running tests in different environments. Automated tests are created directly on the solution and saved in test management tools, as well as all the evidence and results from the test runs.
